

IN THE SPECIFICATION

Please replace paragraph [0054] with rewritten paragraph [0054] below:

[0054] Typically, the dispenser 10 dispenses individual media elements 50 down the discharge chute 24 to another conveyor, a transport box, tote, or otherwise. In any event, the receiver for the dispensed individual media elements 50 may be termed to be a box, and as such its ability to receive more individual media elements 50 may be determined by a box ready sensor 99, ~~not shown~~. It will be understood, however, that whenever a box ready event occurs, operation of the transport conveyor will again begin, irrespective of the operating condition of the front conveyor 20.
